Summary

Backend-focused Software Engineer with experience in Golang, clean architectures. I enjoy solving problems and building that are practical, maintainable, and well-structured — and I'm always looking to learn new technologies and collaborate to ideas into real products.

Education

Bachelor of Science, Computer Science (GPA 3.77)

June 2022 - May 2026

Kasetsart University Kamphaeng Saen Campus

Technical Skills

Programming Languages	Golang, JavaScript, Python, Java
Libraries, Frameworks	Gin, Fiber, Node.js, Express.js, React, FastAPI
Database	PostgreSQL, SQLite, MySQL, Redis
Tools	GitLab, GitHub, Docker, Swagger, Postman, YOLO, EasyOCR

Experience

Application Developer Intern at T.C.C. Technology

Nov 2025 - Mar 2026

Interned at T.C.C. Technology, Thailand's enterprise technology solutions and infrastructure provider.

- Designed and implemented an MVP based on requirements, building end-to-end features using Golang (Fiber), React, PostgreSQL.
- Collaborated with the team to resolve user-reported issues and iteratively improve features based on feedback using React Native, Golang (Fiber) and MySQL.

Projects

Ticket Department Classifier

2026

Helpdesk ticket management backend that automatically routes incoming tickets to the correct department.

- Developed a RESTful API ticket management backend with Clean Architecture.
- Integrated with a teammate's LLM microservice (Gemini) via REST API with HMAC authentication to securely classify tickets to the appropriate department.
- Wrote unit tests to ensure correctness of business logic.
- Tech Stack:** Golang, Gin, PostgreSQL, Docker, Swagger

Commitgen

2026

AI-powered Git commit message generator.

- CLI tool that auto-generates commit messages from staged Git changes using Gemini AI model.
- Configured a GitHub Actions workflow to automatically build and publish versioned releases with a changelog on every tag push.
- Tech Stack:** Golang, Gemini AI Model

Order Management Backend System

2026

Backend system for order management.

- Developed a backend system applying Clean Architecture and RESTful API design patterns.
- Implemented JWT-based authentication middleware, request validation, caching, and migration management.
- Tech Stack:** Golang, Fiber, PostgreSQL, Redis, Docker

Financial Management System with Transfer Slip OCR, Computer Science Project

2025

Mobile expense tracking app for managing income, expenses, and budgets with automatic transaction extraction from bank transfer slips.

- Trained a custom YOLOv8 object detection model on 4,974 slip images across 6 Thai banks, achieving 99.5% mAP50 in date and amount field detection.
- Built an OCR pipeline combining the trained YOLO model and EasyOCR, served as a FastAPI microservice.
- Tech Stack:** Flutter, Node.js, Express, Python, FastAPI, SQLite
